

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

DIOPHANTINE ANALYSIS.

93. Proposed by the late SYLVESTER ROBBINS.

Solve and set forth twenty terms in some infinite series of rational parallelopipeds following the solid whose edges are 2, 3, 6, and diagonal 7.

94. Proposed by L. C. WALKER, A. M., Petaluma High School, Petaluma, Cal.

Show that the area of a rational triangle cannot be a square number.

AVERAGE AND PROBABILITY.

117. Proposed by G. B. M. ZERR, A. M., Ph. D., Professor of Chemistry and Physics, The Temple College, Philadelphia, Pa.

A straight line is drawn at random parallel to the base of a given triangle. Three random points are then taken, one on each side of the random line and one anywhere in the triangle. Find the average area of the triangle formed by the three random points.

118. Proposed by F. P. MATZ, Sc. D., Ph. D., Professor of Mathematics and Astronomy in Defiance College, Defiance, Ohio.

Find the mean distance between two points taken at random in an equilateral triangle.

MISCELLANEOUS.

118. Proposed by L. C. WALKER, A. M., Petaluma High School, Petaluma, Cal.

Show how to determine the illumination at any point of the surface of the water at the bottom of a deep well, due to the light from the sky.

119. Proposed by W. J. GREENSTREET, A. M., Editor of The Mathematical Gazette, Stroud, Gloucestershire, England.

Prove $\sum \cos^4 x - 2 \prod \cos^2 x + 2 \prod \sin^2 x = 1 - \sin(\sum) \sin \prod (y + z - x)$.

NOTES.

Through the kindness of Dr. D. E. Smith, we are enabled to furnish a picture of M. Hermite.

Professor W. H. Metzler, of Syracuse University, has been elected Corresponding Member of the Royal Society of Canada.

During the recent Summer Quarter of the University of Chicago there were offered fourteen mathematical courses with a total registration of three hundred seventeen.

Professor E. Woelffig, of Stuttgart, Germany, is preparing a catalogue of non-periodical literature in mathematics and mechanics, soon to be ready for publication. It will contain about sixteen thousand titles arranged under four hundred headings.
